INTRODUCTION

This bibliography lists selected articles, research reports, monographs, books, and reference works related to test bias and was prepared in response to an increasing number of requests for current information.

The bibliography is limited primarily to material which deals directly with the question of test bias; for example, research reports or commentaries. It does not list reports which are primarily descriptive in nature, such as normative studies of tests on two or more culturally or geographically different groups.

References listed cover the period from 1945 to the present and were located through five primary sources: Current Index to Journals in Education, Education Index, Psychological Abstracts, Research in Education, and the library collection at Educational Testing Service.

To facilitate use of this bibliography, the references are grouped under two main headings: General Educational References and Employment References. Items followed by an ED number (for example, ED 021 639) are available from the ERIC Document Reproduction Service (EDRS). Complete price and ordering information may be found in the most recent copy of Research in Education.

This bibliography was prepared by the staff of ERIC/TM and Mrs. Priscilla Linsley, Librarian at Educational Testing Service.
